Subject: RE: PCB Cleanup

*Ref Ball: 1/24/06*

Dan,

That will work for us. I'll initiate the call to Bud and patch you in. Will you be at your 206 number?

*#754 expansion → Aerospace plant \**

Just to give you a little bit of background, the project in question concerns the Kaiser Trentwood aluminum processing facility. Last week Kaiser met with the WA State Ecology Department to present their proposal for cleaning up PCB contamination in an area where they would like to restart a furnace. They have an agreed order with Ecology under MTCA. Ecology is in agreement regarding the approach, but is aware that EPA must also review.

*Cerney, State - Quantitative \* (DC-4) \* (DC 6, 7, 8)*

I've asked Bud Leber, Kaiser's environmental engineer, to walk you through the proposed cleanup. Part of their plan is to address PCB contamination in a manner that will allow for "continued use" of some areas under 40 CFR section 761.30(p). I've asked Bud to provide a simple diagram to help put the areas in context, so look for that in the next few hours. Is there anything else we can provide in advance?

We're hoping you can give us any informal feedback you may have so we can gauge whether we're on the right track to do a self-implementing cleanup/permissibly leave some of the contaminated concrete in place.

Thanks in advance for your time.

Amy

PCB Cleanup

Hi Dan,  
I just left a message on your voicemail but thought I would send an email in case you're offsite today. We spoke a few weeks ago "hypothetically" about PCB cleanup actions. I was hoping to take you up on your offer to talk informally about the plan my client has come up with for such an action. Do you have any time this week or next for a quick call?

Thanks in advance for your time.

Subject FW: Sketches

Dan,

Here are the sketches that Bud put together for us. We'll give you a  
call momentarily.

Amy,

Here is what I put together last night.

Bud
